

Message from the Editor-in-Chief

I am delighted and privileged to announce to you the launch of the Journal Design Against Fatigue (JDAF), a peer reviewed journal. JDAF being an international, open-access journal, aims to provide a forum for the dissemination of original research articles as well as reviewing articles in all areas related to fatigue and fracture. Contributions which address analytical, computational and experimental studies of all materials will be welcomed.

The JDAF editorial and advisory boards are highly experienced specialists from around the world, all equally motivated and qualified in fatigue and structural integrity. We will expand our editorial board with new members as the journal evolves. We welcome anyone who is interested in joining us in any capacity (author, reviewer, or editorial board).

We share a united vision. By working together we will strive towards making the journal a truly influential, outstanding and impactful publication in the field of fatigue and structural integrity.

We have implemented rigorous peer review criteria, and this will be reflected in the quality of the published articles.

As the Editor-in-Chief of Journal Design Against Fatigue, I'm honoured to invite you to submit your original manuscripts. My vision for JDAF is to become one of the top journals publishing high-quality research in Fatigue and related subjects. I will appreciate all of your support and contributions. If you have any comments or suggestions for JDAF, feel free to contact me at the email below.
